

Conflation Services

we-do-IT Inc., WDI

Conflation is a process that efficiently aligns spatial data for changing land base (roads, parcels, etc...) of electric and gas utility assets.

WDI's asset adjustment process guarantees network connectivity and minimizes GIS freeze periods, aligning land base and facilities for accurate networks and field mobility.

To-date we have adjusted 400 million+ coordinates

Servicing SmallWorld, Esri, and GTech GIS platforms for major global Electric, Gas and Telco utilities. We have conflated assets for major utilities like: **Atmos Energy, Oncor, Duke Energy, Fortis BC, Manitoba Hydro, Piedmont Natural Gas, Water Corporation of WA, Xcel Energy, OPPD** and others.

“ Accurate location of our facilities will not only improve dispatching of crews and field audit functions, but also allow us to better align with other utilities and agencies in the design and coordination of our systems. ”

Tami Davey,
Supervisor of Geospatial Systems
and Drafting for OPPD

Why WDI?

- ✓ Accelerate ADMS readiness
- ✓ Improve GIS data reliability
- ✓ Reduce compliance risks
- ✓ Bridge GIS + IT seamlessly
- ✓ High-volume backlog remediation
- ✓ Achieve key performance indicators that matter
