Data Engineering Services

WDI

Modernizing Utility Networks Through GIS & Data Automation Services

WDI empowers utilities to manage and modernize their geospatial and operational data with accuracy, speed, and scalability. Our expertise spans GIS platforms, legacy cleanup, automation, and real-time analytics—helping utilities stay compliant and future-ready.

Geospatial Data Engineering Services

Scalable solutions to modernize your System of Record (SOR) and manage large volumes of change

- ✓ **Legacy & Backlog Cleanup at Scale** – Specialized teams to tackle years of unprocessed data efficiently
- ✓ **Feeder Model Validation** – Bulk GIS-to-ADMS alignment for network model accuracy

---

Data Quality & Governance

Proven QA frameworks designed for high-volume environments

- ✓ **Automated QA/QC Frameworks** – Built to handle large datasets with precision
- ✓ **KPI & Performance Monitoring at Scale** – Real-time insights across high-volume operations
- ✓ **Field-to-Office Sync** – Ensure consistency across mass data collection and integration

---

Process Automation & Integration

Automate at scale to accelerate throughput and reduce manual burden

- ✓ **Mass Data Migrations** – Seamless transitions from legacy platforms to secure cloud environments
- ✓ **Workflow Automation** – High-volume task automation for faster, error-free processing
- ✓ **Configurable Digital Forms** – Standardize data entry across large field and office teams

---

Why WDI?

- ✓ Accelerate ADMS readiness
- ✓ Improve GIS data reliability
- ✓ Reduce compliance risks
- ✓ Bridge GIS + IT seamlessly
- ✓ High-volume backlog remediation
- ✓ Achieve key performance indicators that matter
