

Experienced GIS consulting services migration and network model connectivity, data quality improvement, land base conflation, process mapping, and ADMS preparedness.

Plug-and-play analytics platforms for GIS Productivity monitoring and Feeder & Circuit Health tracking. Providing immediate access, transparency and actionable insights for GIS managers to track project performance of GIS technicians and databases to monitor.

- ✓ Esri UN consulting in the following areas: migration strategy, data preparation, conversions, third party QA/QC, and electric and gas utility land base conflation.
- ✓ Expert electric and gas utility teams to support GE Smallworld migration, upgrades, data cleaning, network design & capture.
- ✓ Help your team measure quality and maintenance in your Enterprise GIS to ensure complete, reliable, traceable network data.
- ✓ Support GIS migrations from GTech and Smallworld to the Esri UN platform.
- ✓ Regularly provide augmented GIS staffing to Gas & Electric utilities that are quickly scaled depending on the backlog and production requirements of our customers.
